                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         similarity).
SUBCELLULAR LOCATION: Nuclear matrix-associated.
SUBCELLANEOUS: HPV16, in comparison to HPV types 6
Often associated with malignant genital cancers in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA. Has transforming activity. Inactivates, with E6-AP ubiquitin-
protein ligase, the human TP53/p53 tumor suppressor protein by
targeting it to degradation. Binds and targets human MUPP1/MPDz
protein to degradation. Those two functions presumably contribute
to transforming activity (By similarity). Interaction with human
FBLN1 protein also seems to be linked to cell transformation.
SUBUNIT: Forms a complex with E6-AP ubiquitin-protein ligase which
interacts with human P53. Binds to human FBLN1 and MPDZ (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY: Belongs to the papillomaviruses E6 protein family.
                                                                                                                                                                                                                                                                 121
